

Habitat *for a Lifetime.*

C O N F I D E N T I A L

2023 DEALER CONSERVATION CUBE PRICE LIST

MossBack Fish Habitat has a new innovation in fish habitat called the Conservation Cube.

The Conservation Cube combines the many benefits of our individual products into a larger and more substantial habitat structure for your body of water and fishery to thrive in. The Cube is made of four interconnected trunks that form a habitat structure *much larger in volume* than an individual product. Cubes are

available in 20", 40", or 60" heights for varying depths of water. By interconnecting four trunks together, MossBack reduces materials costs and passes that savings onto our agencies and dealers.

- Conservation Cubes offer considerably more *structure, surface area, shade, and stability* than any other artificial habitat on the market today. Conservation Cubes have all of the same benefits as MossBack's other fish habitats.
- **Economy:** MossBack is passing on the savings of reducing the cost of the Conservation Cube by interconnecting the trunks together and reducing parts.
- **Economy bulk freight:** Pre-palletized bulk orders only minimize freight costs to agencies and dealers.
- Assembly is straight forward, simple, and time efficient—no power tools, glues, or screws needed.
- The unassembled Conservation Cube limbs and trunks *easily nest together* making packing and transporting the unassembled Cube very *efficient when moving the habitat* to the installation site.
- Limb patterns can be adjusted to accommodate small fish or large predator fish. *Flexibility to modify the habitat structure* to either sanctuary type or predator type of fish structure.
- Conservation Cubes are *very stable and can hold their place on underwater inclines.*

Pallets (packaged and sold in pallets only for bulk pricing)

| | Part # | Price | Suggested Retail Price |
|---|-----------|---|------------------------|
| Conservation Cube 20" (30 cubes total) 120-20" trunks, 840-46" limbs | MB-CC20-P |  | \$7,838.55 |
